Article: 360-deg profilometry: new techniques for display and acquisition

Basic View

Title: 360-deg profilometry: new techniques for display and acquisition
Authors: Asundi, A
          Chan, CS
          Sajan, MR
Keywords: Profilometry, Logical moire, Phase shifting, Scanning moire structured light, Projected gratings
Issue Date: 1994
Publisher: SPIE - International Society for Optical Engineering. The Journal's website is located at http://www.spie.org/oe
Citation: Optical Engineering, 1994, v. 33 n. 8, p. 2760-2769
DOI: http://dx.doi.org/10.1117/12.178507
Abstract: Two optical methods are proposed for shape measurement and defect detection of curved surfaces in the form of a complete 360-deg profile of the object. The first one is the standard structured light approach. Display of the resulting data is the emphasis of this section. The second approach uses modulated structured light with a scanning digital camera for faster and simpler data acquisition. Quantitative processing is done off-line while real-time moire produces enhanced display of the defects for qualitative analysis.

**Postgraduate Thesis:** Quantifying the urban heat island (UHI) intensity in Hong Kong

**Title:** Quantifying the urban heat island (UHI) intensity in Hong Kong

**Authors:** Siu, Leong-wai

**Issue Date:** 2011

**Publisher:** University of Hong Kong (Pokfulam Road, Hong Kong)

**Abstract:** The definition and quantification of urban heat island (UHI), the air temperature differences between urban and rural areas, remains problematic. This is due, in large part, to the difficulty of operationalizing the terms “urban” and “rural,” especially with regard to classifying the weather stations that provide data. This thesis studies the urban heat island (UHI) intensity in Hong Kong and there are three foci in the research. The first focus of the study is the determination of the urban and rural weather stations in Hong Kong. The Local Climate Zones (LCZ) system has been employed to classify 17 weather stations and field observation was the main technique to collect the necessary metadata. Six field trips were arranged in the summer of 2009 and 2010. Hong Kong Observatory Headquarters (HKO) is considered as the only representative urban station, whilst Ta Ku Ling station (TKL) is another reference rural site. The second focus is the quantification of the UHI intensities at six pairs of stations in Hong Kong and their diurnal and seasonal variations. The 19-year annual UHI intensities in Hong Kong suggest that the representative rural sites (TYW and TKL) also record representative UHI intensities for the region. The differences of the cooling rate at urban and rural stations drive the diurnal cycle of urban heat island. The seasonal variations of UHI intensities are also driven by the cooling rate differences of urban and rural stations in different seasons. Since the mean maximum urban cooling rate does not vary considerably throughout the seasons (0.4 – 0.5 °C/hr), it is the alteration of the rural cooling rate (1.0 – 1.6 °C/hr at TYW, 0.8 – 1.2 °C/hr at TKL) which determines the seasonal variations of UHI intensities. The mean daily maximum UHI intensities in Hong Kong are greatest in winter. The final focus is the meteorological impacts of the UHI intensity in Hong Kong. Five meteorological elements, including air temperature, wind speed, vapour pressure, cloud cover, and cooling rate, have been separately investigated to establish their impacts on the UHI intensity. Under fine weather conditions, the first four elements are negatively related to the UHI intensity. Sixteen regression models were built after the use of stepwise procedures which optimize the combination of independent variables. Rural air temperature is considered the most important meteorological factor on the UHI intensity. The models also suggest that there are other factors affecting the UHI intensities in spring and summer.

Grants (Projects)!
Grant: Reinforced concrete coupling beams with embedded steel plate

General Research Fund (GRF)

Application

Eligibility

Types of Research

Academic Research

i. Basic research - research for the sake of advancing the frontiers of knowledge regardless of whether it would provide immediate benefit to mankind; and

ii. Applied research - efforts directed at meeting certain functional requirements which involve the application of theories to specific areas or for specific purpose, and/or enhance man's existence in the short to medium term.

Contact Research

Efforts which would lead to the delivery of a product or process and could involve both basic and applied research, though the latter is much more prevalent. Contract research is client-specific and is generally sponsored and financed by the client who can be either a private company or a public body or the Government.

Criteria for Consideration of Competitive Bids

Project Title

Reinforced concrete coupling beams with embedded steel plate

Basic View | XML View

Principal Investigator: Su, Kai Leung

Co-Investigator(s): Pang, Ho Tat, Joen

Funding Year: 2003/2004

Amount:

25000

Start Date: 01-10-2003

Expected Completion: 30-09-2005

Status: On-going

Sponsor: RGC Projects (Block Grant)

Grant Type/Funding Scheme: Merit Award for RGC GRF Funded Projects

Duration: 24

Objectives: N/A

Publications:

- Effects of shear connectors on plate-reinforced composite coupling beams of short and medium-length spans
- A survey on axial load ratios of structural walls in medium-rise residential buildings in Hong Kong
- Seismic behaviour of slender reinforced concrete shear walls under high axial load ratio
- Experimental study on embedded steel plate composite coupling beams
- A brief summary of parametric study of plate-reinforced composite coupling beams
- Strengthening of reinforced concrete coupling beams by bolted steel plates
- The effects of shear connectors on plate-reinforced composite coupling beams
- A study of bolted connections of external plate strengthened coupling beams
- Assessment of seismic drift demand and capacity of buildings in Hong Kong
- The short and long-term demand of coupling beams under potential seismic loads in Hong Kong

Granted Patent: Luminescent Gold (iii) Compounds, Their Preparation, And Light-emitting Devices Containing Same

Abstract
A class of luminescent gold(III) compounds with a tridentate ligand and at least one strong sigma-donating group having the chemical structure represented by the general formula (I): #STR00001## wherein R sub.1-R sub.4 each independently represent the group containing hydrogen, halogen, alkyl, substituted alkyl, alky, substituted aryl, heteroaryl, alkoxyl, substituted alkoxyl, amino, substituted amino, cyano, nitro, alkylcarbonyl, alkoxy carbonyl, aryloxycarbonyl, aryloxy carbonyl, mono- or dialkylaminocarbonyl, alkyl carboxyl, aryl carboxyl, and the like; X, Y and Z each independently represent a heteroatom or a carbon; #STR00002## represents an aromatic or heterocyclic 5- or 6-membered ring; alpha and beta each independently represent a bridge for an aromatic or heterocyclic 5- or 6-membered ring or represent a break for non-cyclic moiety; C-X, C-Y and C-Z each independently represent a single bond or double bond; n represents a zero or an integer; p, q and r represent positive integers.

Visualizations!
Has Visibility Increased?
I must say that the HKU ResearcherPage team did an amazing job. Even without my direct input in the first place, they were able to compile a list of my publications and other accomplishments in a near complete version. After a couple of cycles of communication between the team and myself, I now have a full account of my publications and other accomplishments online that I can share with anyone who might be interested in my research. Best of all, I know that this information is in the safe hands of trained professionals so I don't need to worry about updating and can spend more time on my research.

--- Professor, Department of Physiology
