

Lecture in Oral & Maxillofacial Surgery

Professor Lim Cheung and Professor Urban Hägg

Changes in the faces and smiles of patients with dentofacial deformities

In recent years, new materials and more versatile techniques have made it possible for increasingly complex dentofacial deformities to be treated by multidisciplinary teams, with maxillofacial surgeons and orthodontists as the core team members. This lecture will demonstrate the treatment of these challenging cases. Through teamwork, maxillofacial surgeons and orthodontists can bring back smiles to these patients.
