[57] **ABSTRACT**

A mobile phone system with a mobile phone having internal accounting capabilities for real time call debiting to account for the billing parameters of a mobile phone unit that is operated in a multi zone communication network with a complex rate structure, the mobile phone unit having an internal processor with accessible internal memory for storing the accounting program and call data for each call, a clock and circuit means for activating and deactivating the phone, the accounting program including an updatable rate table and a complex billing algorithm for calculating the account status on the fly including multiple rate structure factors such as long distance calls, international calls with country independent local charges, charges for roaming per day and/or roaming per minute, and call surcharges, where the account status of the mobile phone is calculated in real time for decrementing a debit account or calculating an account charge on demand, the mobile debit phone having a signal for alerting the user of account status which is

## PEREMPUAN DALAM POLITIK DI SULAWESI SELATAN

*Siti Maryam*

### Pendahuluan: Politik Perempuan Politik

Di Sulawesi Selatan, pada masa Orde Lama, proporsi perempuan dalam parlemen rata-rata hanya mencapai dua persen. Berbeda pada masa pemerintahan Orde Baru, proporsi perempuan dalam parlemen dapat mencapai 20 persen. Namun, dari hasil Pemilu 1999, jumlahnya perwakilan rakyat tersebut mengalami penurunan hingga proporsinya mencapai 6 persen saja. Cukup jelas bahwa tingginya proporsi perempuan parlemen pada masa pemerintahan rezim Orde Baru tidak lalu berarti tingginya kadar kesadaran perwalian politik dari rakyat, di Sulawesi Selatan khususnya.

Masalah bias jender dalam politik, saat ini sudah menjadi isu global dan terjadi hampir di seluruh berbagai negara di belahan dunia. Dalam Konferensi Dunia ke-4 tentang wanita tahun 1995 di Beijing, masalah bias

# Certain Topics in Telegraph Transmission Theory

H. NYQUIST, MEMBER, A. I. E. E.

*Classic Paper*

*Synopsis—The most obvious method for determining the distortion of telegraph signals is to calculate the transients of the telegraph system. This method has been treated by various writers, and solutions are available for telegraph lines with simple terminal conditions. It is well known that the extension of the same methods to more complicated terminal conditions, which represent the usual terminal apparatus, leads to great difficulties.*

*The present paper attacks the same problem from the alternative standpoint of the steady-state characteristics of the system. This method has the advantage over the method of transients that the complication of the circuit which results from the use of terminal apparatus does not complicate the calculations materially. This method of treatment necessitates expressing the criteria of distortionless transmission in terms of the steady-state characteristics. Accordingly, a considerable portion of the paper describes and illustrates a method for making this translation.*

*A discussion is given of the minimum frequency range required*

as ordinates with their frequencies as abscissas, and when the frequency axis is divided into parts each being a frequency band of width numerically equal to the speed of signaling, it is found that the information conveyed in any band is substantially identical with that conveyed in any other; and the bands may be said to be

- 3) The minimum band width interpretation is substantially independent of the number of bands.
- 4) A criterion of perfect reception is given of received wave must have

The HKU Libraries through its digitization projects, has opened up online access to local collections originally in print format only. The first HKUL Digital Initiative, ExamBase, was launched in 1996 and other projects of scholarly interests were subsequently introduced. More digital projects are being developed to provide continuous access to digital content and services.

## MarcEdit: Downloads

[Current Version](#) | [XSLT](#) | [Previous Version](#) | [Patches](#)

### For Everyone:

**MarcEdit 5.1 -- Updated on April 17, 2008 -- [Download](#)**  
MarcEdit 5.1 is the latest and greatest version of MarcEdit. The MarcEdit 5x series requires the 2.0 version of the .NET framework.

**MarcEdit 4.6.63 -- [Download MarcEdit 4.6a](#)**  
**Added:** Setup file updated as of Jan. 21, 2005. Update corrects a bug introduced in the 4.6 MARC-8 to UTF-8 conversion tool. This version of MarcEdit has been superseded by MarcEdit 5.1.

### Additional XSLT Crosswalks for use in MarcEdit.

**MARC=>RDFDublin Core** -- [Download Now](#)  
**EAD=>MARC21XML** -- [Download Now](#)

**MARC=>OAI Static** -- [Download Now](#)

To implement these, or any crosswalks, please see the following instructions: [XSLT Loading Instructions](#)

### Previous Versions

**MarcEdit 4.5.9397 -- [Download MarcEdit 4.5 Update 3 Now](#)**  
**Added:** MarcEdit 4.5 Update 3 is a full, updated version of MarcEdit 4.5+. This version supersedes all previous versions. To see what's been corrected or changed in Update 3, please see the [Change Log](#).  
MarcEdit 4.5+ is probably my most ambitious upgrade to date. Over the past year and a half, I've implemented a native Z39.50 client, XML API and Unicode support for the MarcEditor. This upgrade represents a major improvement to the MARCEngine's traditional MARC functionality, in addition to the inclusion of an XML API which will allow any user to create
